1)How to set-up Colors template

Three layout versions of template: paralax, slider and video.

This template is built on Bootstrap 3 grid css responsive framework.

Template consists of: html files, css folder with styling css files, php files for contact form, js folder with java scripts, and images folder for images.

To **set up contact form** find sendemail.php file and replace uppercase letters with your data. If you're not sure how to set up contact form ask your hosting provider for help and show this file. They should tell you your hosting company data that should be added here.

Bootstrap 3 framework doesn't fully support Internet Explorer 8. In IE8 this template layout looks wide because IE 8 doesn't support media queries that are included in Bootstrap 3 framework. Bootstrap 3 has mobile first approach and that means layout is first set for small screens (as wide layout) and then using media queries it is set for desktops too. That's why it looks wide in IE8 because IE8 doesn't support media queries and can't convert mobile first wide layout settings.

1a) Fonts

This template uses following fonts:

Arvo (Google font) and PT Sans(standart font).

2) HTML Structure

3 html files. One „one page“ main file and two additional files for additional pages.

3) CSS Files

In css folder you will find files with css extension called css files. Those files are connected with html files with links inside of html files and they are applying style to them.

Main css

file is named style.css.

There are also following css files:

- css/bootstrap.css (bootstrap 3 framework)
- bxslider.css (for testimonials and clients carousel)
- media.css(for media queries)
- owl carousel and owl carousel (for full width image carousels)
- ie8 for Internet Explorer 8 fix.
- colorbox (for pop up new window)
- animate.css
- font-awesome.css(for icon font)

Folder „fonts“ with „awesome“ font icons included.

4) JavaScript

This template imports following Javascript files from js folder:

1.jquery.js, jquery-migrate.js

jQuery is a Javascript library that greatly reduces the amount of code that you must write.

2.cbpsroller.js, classie.js

For left and right paralax effect

3.bxslider.js for testimonials

4.

modernizr.js

5. parallax.js

For paralax scrolling

6.bootstrap.js

For js scripts that comes with bootstrap css framework.

7.retina.js for retina images

8. colorbox.js

For pop up window

9. isotope.js

For filtering portfolio

(this is premium plugin)

10. imagesloader.js

11. owl carousel.js

For full width image carousels

12. smoothscroll.js

5) php files

Sendemail.php and phpmailer for contact form

6) Sources and Credits
